Blue Granite Tiles

Blue granite tiles have achieved a special status as building stones world over. The principal characteristics of blue granite, include high load bearing capacity, crushing strength, abrasive strength, amenability to cutting and shaping without secondary flaws, ability to yield thin and large slabs and - above all - durability. Blue granite tiles have various blues. And blue pearl granite is a wonderfully blue, large crystal granite from Norway. What many fabricators do not realize is that there are several types of blue pearl granite. Our blue granites with its jewel - like play in crystal lustre, is produced from our own quarry, which is good, exquisite quality.
